

Oceanographic and Biological Data, Hawaiian Waters, January-July 1961

SPECIAL SCIENTIFIC REPORT—FISHERIES No 436

UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE

Created in 1849, the Department of the Interior--America's Department of Natural Resources--is concerned with the management, conservation, and development of the Nation's water, wildlife, mineral, forest, and park and recreational resources. It also has major responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the Department works to assure that non-renewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States--now and in the future.

UNITED STATES DEPARTMENT OF THE INTERIOR, STEWART L. UDALL, SECRETARY

Special Scientific Report: Fisheries No. 436

Washington, D. C.

July 1962

ABSTRACT

This report contains the biological and oceanographic data collected on three cruises in the central North Pacific of the U.S. Bureau of Commercial Fisheries research vessel Charles H. Gilbert in 1961. The collection of data was designed to determine the distribution of surface water types and associated biota, particularly skipjack tuna, Katsuwonus pelamis (Linnaeus). The area investigated was between longitudes 150° W. and 170° W. and latitudes 15° N. and 24° N. The data presented comprise records of observations at bathythermograph lowerings, meteorological observations, zooplankton station positions, and weights of samples (g./1,000 m.³), records of sightings of fish schools, bird flocks, and aquatic mammals, surface trolling catch records, and skipjack tagging records.

OCEANOGRAPHIC AND BIOLOGICAL DATA, HAWAIIAN WATERS,

JANUARY - JULY 1961

By

Kenneth Sherman, Fishery Biologist
and

Robert P. Brown, Oceanographer
Bureau of Commercial Fisheries Biological Laboratory
Honolulu, Hawaii

INTRODUCTION

This is our second report presenting oceanographic and biological data collected on cruises in the central Pacific area between latitudes 15° N. and 26° N., longitudes 145° W. and 170° W. by research vessels of the Bureau of Commercial Fisheries Biological Laboratory, Honolulu, Hawaii. The first report (Sherman and Brown, 1961) includes the tabulation of data collected on five cruises made during January-October 1959.

The three oceanographic surveys made in the period January-July 1961 were the final ones in a program undertaken by the Biological

Laboratory, Honolulu, designed to: (1) delineate the boundaries between the North Pacific Central Water Type, the zone of intermediate salinity, and the North Pacific Equatorial Water Type; and (2) monitor the seasonal movements of those boundaries and of the associated marine biota, particularly the skipjack tuna, *Katsuwonus pelamis* (Linnaeus). Cruise periods and vessel tracks are shown in figures 1, 2, and 3.

The present report contains a record of observed physical and biological data from the three 1961 cruises. These are presented without analysis.

Figure 1. --Vessel track for Charles H. Gilbert cruise 51, January 16 to February 28, 1961.

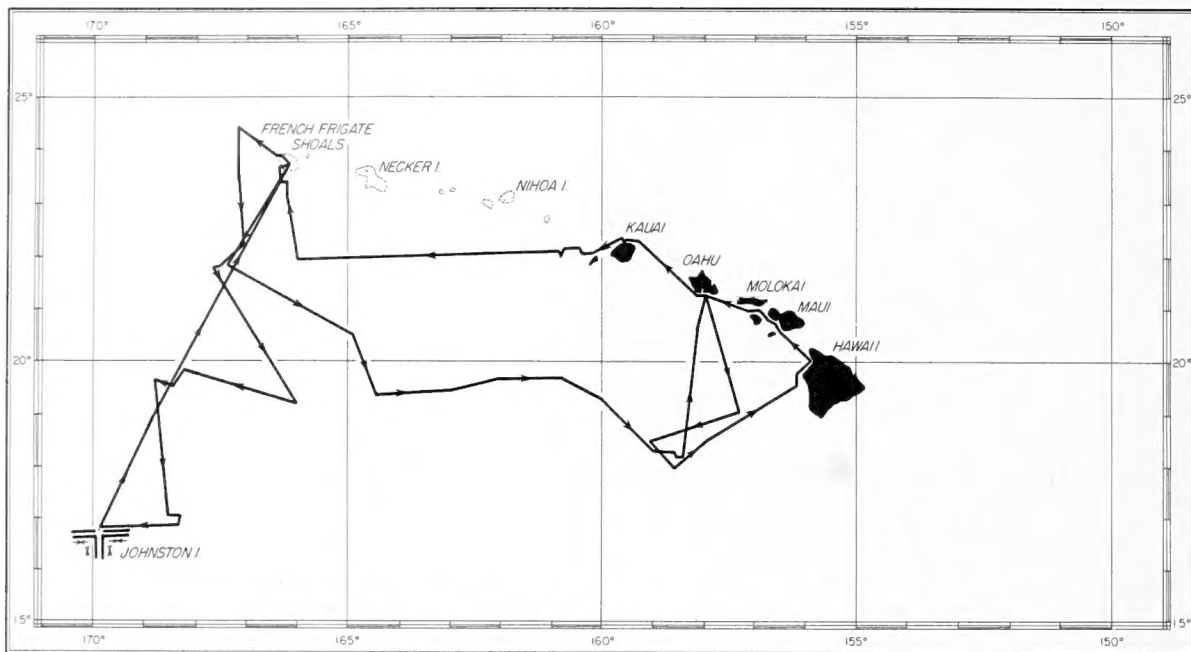

Figure 2. --Vessel track for Charles H. Gilbert cruise 52, March 27 to May 17, 1961.

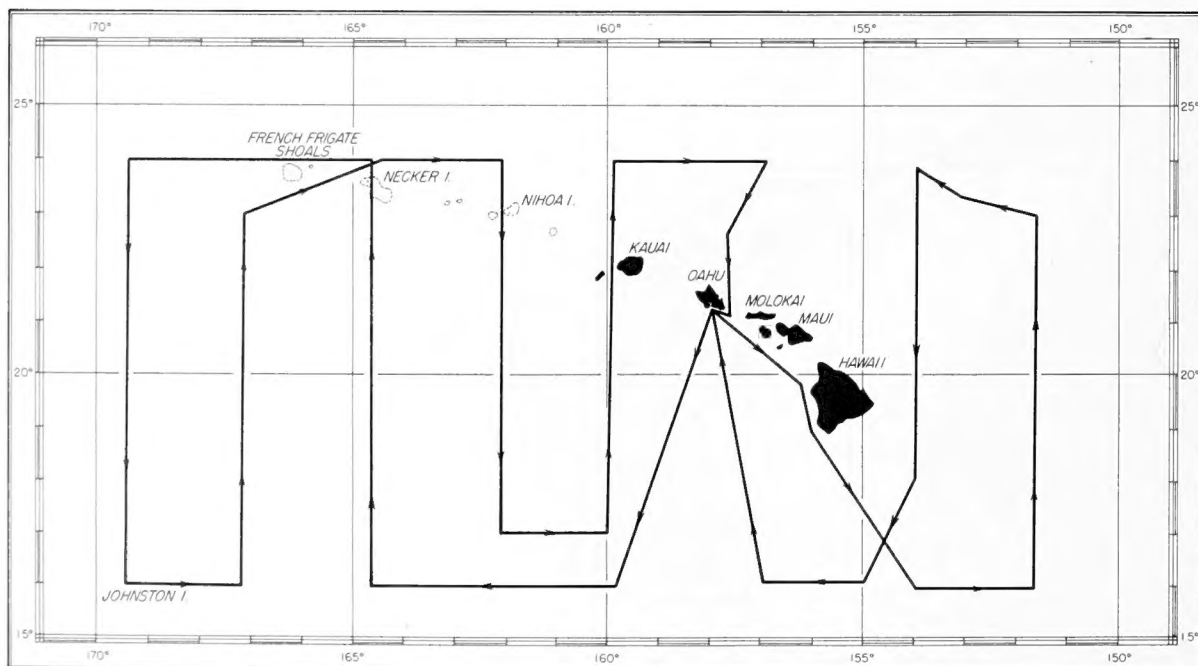

Figure 3. --Vessel track for Charles H. Gilbert cruise 53, June 20 to July 30, 1961.

An analysis of the 1959 data is contained in a report by Brown and Sherman (MS)^{1/}. A report concerning the results of both the 1959 and 1961 cruises is now in preparation (Brown and Sherman (MS))^{2/}.

FIELD PARTY PERSONNEL

Charles H. Gilbert - William T. Tanaka, Master

Cruise 51

Kenneth D. Waldron - Field Party Chief
Robert P. Brown - Oceanographer
Robert A. Morris - Fishery Research Biologist

Cruise 52

Kenneth D. Waldron - Field Party Chief (March 27 to May 8)
Kenneth Sherman - Fishery Biologist (March 27 to May 2)
Gary H. Miller - Fishery Aid (May 3-8)
Richard S. Shomura - Field Party Chief (May 9-17)^{3/}
Eugene L. Nakamura - Fishery Biologist (May 12-17)
Richard A. Barkley - Oceanographer (May 12-13)
Herbert J. Mann - Fishery Methods and Equipment Specialist (May 12-17)
Robert P. Brown - Oceanographer (May 17)
Thomas Y. Toyama - Physical Science Technician (May 17)

Cruise 53

Robert P. Brown - Oceanographer, Field Party Chief
Thomas Y. Toyama - Physical Science Technician
Gary H. Miller - Fishery Aid
Roy Goss - Hawaii Science Club Student
David Godfrey - Student (June 20 to July 3)

^{2/} Brown, R. P., and K. Sherman (MS). Distribution of surface water types, skipjack, and other biota in the central Pacific during 1959 and 1961. Bureau of Commercial Fisheries Biological Laboratory, Honolulu.

^{3/} From May 9 to 17 field trials of experimental gill nets for capturing skipjack were conducted.

FIELD PROCEDURES

Bathythermograph and Meteorological Observations

Bathythermograph (BT) lowerings were made and a surface salinity sample was collected every 3 hours during the three cruises. The observations of weather and sea at each BT lowering appear in tables 1-3. The BT slides, prior to deposition in the U.S. Navy Hydrographic Office, were processed at the laboratory by the method described by Callaway (1957).

Weather observations were recorded at 0000, 0600, 1200, and 1800 GCT daily. These data are presented in tables 4 to 6 (U.S. Weather Bureau Forms 1210-F and 615-5). Recording and coding follow the "Manual of Marine Meteorological Observations" (U.S. Weather Bureau, 1959).

Zooplankton Collections

Ninety-nine plankton hauls were made. Of these, 49 were 1/2-hour, 0-60 m. oblique hauls and 50 were 1/2-hour surface tows.

All plankton hauls were made using a 1-m. net (King and Demond, 1953) with a body of No. 656 Nitex, aperture width 0.66 mm., and with a cod end of No. 308 Nitex, aperture width 0.31 mm. Positions, times of collection, and zooplankton weights are given in tables 7 to 9.

Surface Fish School, Bird Flock, and Aquatic Mammal Sightings

A watch was maintained for surface fish schools, birds, and aquatic mammals during the daylight hours. Summaries of these observations are presented in tables 10 to 12.

Surface Trolling

Two lines were trolled during daylight hours. A summary of surface trolling results for the three cruises is presented in table 13. Common and scientific names of fish caught are listed in table 14.

Tagging

A total of 241 skipjack were tagged with the all-plastic dart-type tags described by Yamashita and Waldron (1958). A summary of skipjack tagging results is presented in table 15.

LABORATORY PROCEDURES

Salinity Determinations

The surface salinity samples obtained at each bathythermograph lowering were analyzed on shipboard using a modification of the Knudsen method (Van LANDINGHAM, 1957). A comparison of the shipboard and subsequent laboratory determinations showed no significant difference between the two. The salinity data are included in tables 1 to 3.

Zooplankton

For all cruises, the methods of determining zooplankton abundance described by King and Hida (1957) and Sherman and Brown (1961) were followed.

	7/12	1858	23°24'	164°34'	Little tuna	2
	7/17	0930	16°46'	169°34'	Wahoo	1
	7/21	1600	19°48'	167°05'	Dolphin	1
	7/29	0630	24°03'	157°10'	"	2

Table 14.--Common and scientific names of fishes reported in tables 10-13

Common name	Scientific name
Dolphin	<u>Coryphanena hippurus</u> Linnaeus
Skipjack tuna	<u>Katsuwonus pelamis</u> (Linnaeus)
Yellowfin tuna	<u>Neothunnus macropterus</u> (Temminck and Schlegel)
Bigeye tuna	<u>Parathunnus sibi</u> (Temminck and Schlegel)
Little tuna	<u>Euthynnus yaito</u> Kishinouye
Bonito	<u>Sarda orientalis</u> (Cuvier and Valenciennes)
Wahoo	<u>Acanthocybium solandri</u> (Cuvier and Valenciennes)
Barracuda	<u>Sphyræna nigripinnis</u> Temminck and Schlegel
Jack	<u>Caranx</u> sp.

Table 15.--Record of skipjack tagging

Cruise	Date, 1961	Position		Number tagged	Average size (lbs.)
		Lat. N.	Long. W.
